FABCON + SQLCON 2026

Microsoft Fabric capabilities reaching general availability

Customer-ready snapshot | Verified against Microsoft announcement sources

PRODUCTION READY
GA / GA announced

ONE LAKE — GA

Oracle mirroring

Continuously bring Oracle data into OneLake without custom ETL.

ONE LAKE — GA

SAP Datasphere mirroring

Unify SAP Datasphere data with Fabric analytics and AI.

ONE LAKE — GA

Shortcut transformations

Shape data as it connects to, or moves within, OneLake.

SECURITY — GA ANNOUNCED

OneLake security

Unified roles plus table/folder and row-level controls that follow the data.

DATA ENGINEERING — GA

Materialized lake views

Keep medallion pipelines current in Spark SQL and PySpark with less orchestration.

REAL-TIME INTELLIGENCE — GA

Maps in Fabric

Turn high-volume geospatial data into interactive, real-time operational insight.

POWER BI + IQ — GA

Direct Lake on OneLake

Read OneLake tables with native security, cross-item modelling and import-class performance.

FABRIC IQ — GA ANNOUNCED

Graph in Fabric

Model, visualise and query complex relationships across connected business data.

AI — GA

Fabric data agents

Create domain-grounded virtual analysts for deeper analysis and trusted answers.

DEVELOPER — GA

Fabric local MCP

Connect AI coding assistants such as GitHub Copilot directly to Fabric.

EXTENSIBILITY — GA

Fabric Extensibility Toolkit

Create and operate custom Fabric workloads with CI/CD and admin management.

INTEROPERABILITY — GA

Snowflake interoperability

Work across Snowflake and OneLake with open, governed interoperability.

THE SIGNAL Fabric is converging data integration, analytics, real-time intelligence, semantic context and AI on OneLake.

Availability note: “GA announced” means Microsoft stated general availability would follow in the coming weeks. Confirm regional availability before deployment.
